

Eagle™

The Definition of Dependability

With over 20 years of history Columbia's Eagle line of passenger vehicles has evolved into an extremely reliable performer. Continuing the legacy of earlier vehicles, we hold to the philosophy of building a dependable vehicle by paying attention to details and simplifying mechanics and maintenance wherever possible.

Golf, Community & Neighborhood Electric Vehicles

Our Eagle soars on the course or around town. Initially developed as a golf-enthusiasts vehicle, the Eagle has become much more; It now affords its owner the ability to run to the store, or take a quick trip to the post office, while never relinquishing its title as the *discerning golfers golf car*. Configured as a neighborhood electric vehicle, the Eagle is ready for use on most city streets (check local laws and regulations), and is one of very few vehicles available that can be driven both to the clubhouse, and onto the course.

Gas & Electric Power - Your Choice!

Our gas powered Eagle can be driven by a powerful 13-hp Briggs&Stratton® engine. Columbia is proud of our gas vehicles, but we are down-right ecstatic about our electric drive systems. Our 48-volt systems are truly unique; instead of the six 8-volt batteries most of our competitors use, Columbia vehicles use eight 6-volt batteries. Experience and customer response has shown us that this is the very best system for extended run time *and* better hill climbing ability.

Up to 4 Passengers

Available in configurations for two or four passengers, the Eagle will move you, your friends, your family, and your "stuff" any where you want to go.

Lifetime Frame Warranty - Worry free!

We are so confident in the construction and finished quality of our frame, we offer a lifetime frame warranty. Your frame is guaranteed to resist rust and major mechanical malfunction *for the life of your vehicle*. See our Warranty Statement for details.

"Best in Class" Distance & Hill Climbing - Out-performs, Out-lasts!

In recent independent testing against leading competitors, Columbia's 48-volt system out-ran them all. Up hills the Eagle out-performed its competitors by a noticeable margin. With the increased storage capacity of our 48-volt system, the Eagle easily out-lasted our closest competitor by several miles.
